- Replaced 4 MB of design-tool code (React + Babel) with a 70-line `theme.js`
- Verified against the live site: identical page height (18,244 px) and section sizes
- Carousel and tab counts now detected automatically (were fixed at 5)

Design refinements

- Opening: navy screen, geometric pattern draws out from the logo (replaced lime + stair panels)
- Section labels: bold tracked Arial, title then green dash
- Geometric line pattern behind National Reach and Results That Speak
- Kinetic band in EB Garamond + Arial; calmer motion
- Every section on one 1360 px grid line; spacing fixes throughout

Content & function

- National Reach map enlarged beside the stats
- Process tabs larger; headings on one line
- Listings window shows only the Buildout listings, with a clear link to franklinst.com
- Header logo links to franklinst.com
- Logo rows: no side fades

System & tools

- **new-deck.sh** starts a deck from any template
- **check-deck.py** catches missing files, tab/panel mismatches, TBDs, bad links
- **preview.sh** serves a deck locally
- **unbundle.py** converts any future single-file export
- 7 guides, 2 intake questionnaires, brand and team libraries, dated template backups

FOLDER STRUCTURE

Everything lives in *Desktop/Decks.*

SITE FILES

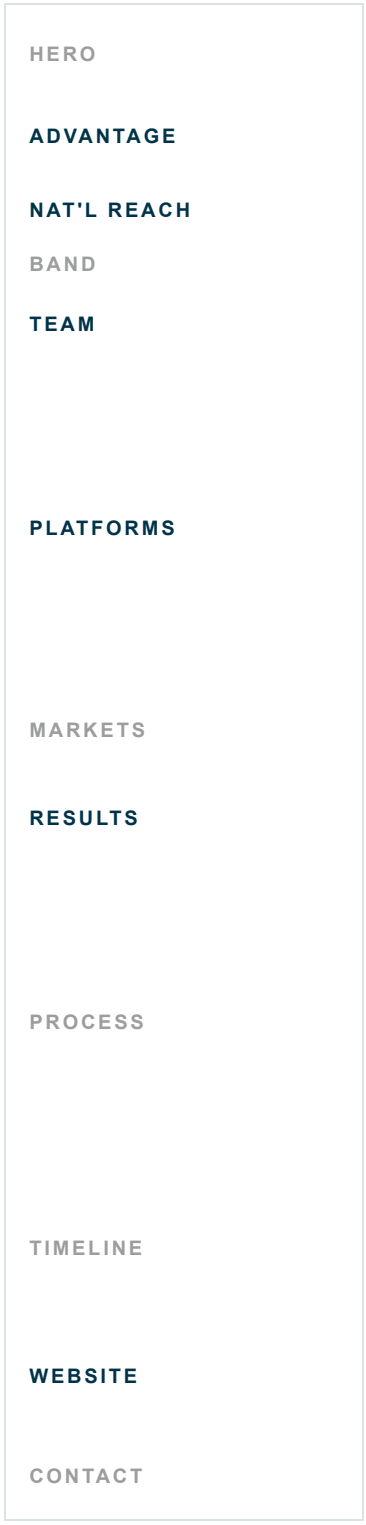

Seven files run the *whole page.*

Plain HTML, CSS and JavaScript. No build step and no framework: open `index.html`, edit, refresh.

FILE	LINES	WHAT IT DOES	EDIT IT FOR
`index.html`	1,131	Every word, link, photo and video on the page, section by section	All content changes
`css/styles.css`	580	Layout, brand colors (`:root`), sizes per section, the pattern backdrops, label style	Spacing, colors, sizes
`css/motion.css`	38	Animation styles: opening, cursor, side rail, sheen, kinetic band	Rarely
`css/fonts.css`	454	Libre Baskerville + Open Sans, self-hosted	Never
`js/main.js`	262	Nav, 3D carousel, video autoplay on view, pinned Process tabs, logo color	Rarely
`js/motion.js`	735	Opening sequence, smooth scroll, arrow-key and clicker stops, side rail, reveals, counters	Adding a new section (`var CH`)
`js/theme.js`	78	Palette, headline style, section spacing and per-section padding exceptions	Switching look; spacing
`assets/`	61 files	`img/` backgrounds, brand, team, logos, maps, patterns, properties · `video/` · `fonts/`	Swapping photos (same file name = no code change)

PAGE ANATOMY

Eleven sections, *top to bottom.*

SECTION	FIND IN INDEX.HTML	HOLDS
Opening	`id="m-intro"`	Logo, tagline, 0–100% counter
Nav	`<nav id="nav">`	Logo (→ franklinst.com), 7 links, Contact
Hero	`== HERO`	3-line headline, subhead, 4 award chips, stat card
Advantage	`== ADVANTAGE`	Text card, values, Vimeo video
National Reach	`== RESULTS`	US map, 6 platform stats
Kinetic band	`KINETIC TYPE BAND`	Two rows of scrolling words
Team	`== TEAM`	3 people, recognition row
Platforms	`== PLATFORMS`	5 tabs, each with video + copy
Markets	`== MARKET`	Partner + deal logo rows, FL map with dots
Results That Speak	`ASSIGNMENTS`	3D carousel of 5 property cards + dots
Process	`== PROCESS`	5 tabs, each with headline + 3 points
Timeline	`== SERVICE TIMELINE`	Weeks 1–5+, action checklists
Website	`== LIVE WEBSITE`	Buildout listings window, green exit button, 3 callouts

Drawn to scale: 10,244 px total on a 1440 px laptop.

	WEBSITE	exit button, 3 callouts
Contact	== CTA	Headline, consultation email, 3 contact cards, office

HTML PATTERNS

Copy a block, *change the words.*

Every section repeats a few patterns. Keep the class names; change text, links, image paths and counts.

Section heading (all sections)

```
<!-- label: bold Arial, green dash added by CSS -->
<div class="ey r">Leasing Strategy</div>
<!-- <em> = the green/teal italic word -->
<h2 class="proc-h2 r">Our <em>Process.</em></h2>
```

Carousel card (Results That Speak)

```
<div class="c3d" data-i="5">            ← 0,1,2… no gaps; first card also has "activ
  <div class="c3d-inner">
    <div class="c3d-img" style="padding:0;">
      <span class="c3d-tag">Grocery-Anchored</span>
      <img src="assets/img/properties/new-property.jpg" alt="New Property" style="pos
    </div>
    <div class="c3d-body">
      <div class="c3d-loc">Tampa, FL</div>
      <h3 class="c3d-title">New Property</h3>
      <p class="c3d-desc">One or two sentences on the result.</p>
      <div class="c3d-pills"><span class="c3d-pill">Publix</span></div>
    </div>
  </div>
</div>
<!-- plus one dot per card -->
<button class="c3d-dot" onclick="setCard(5)"></button>
```

Pinned tab + panel (Platforms, Process)

Pinned tab + panel (Platforms, Process)

```
<button class="plat-tab" data-panel="2" onclick="goPlatform(2)">…</button>   ← tab N
<div class="plat-panel" data-panel="2">                                      ← panel N (same
  <div class="plat-media">
    <iframe class="js-vimeo" src="https://player.vimeo.com/video/1074088936?…"></ifra
  </div>
  …
</div>
```

Look & spacing switch (js/theme.js)

```
var DECK_THEME = { palette: 'teal', typeStyle: 'editorial', energy: 'refined' };
var PAD_OVERRIDES = {            // per-section spacing exceptions (px)
  advantage:   { bottom: 24 },
  results:     { top: 80 },
  assignments: { bottom: 48 },
  process:     { top: 0 }
};
```

DECK WORKFLOW

Template to live link in *five steps.*

1

Start

Copies a template and a blank deck folder

`new-deck.sh "Name" Leasing`

2

Intake

Answer the template's questions; Claude can interview you

`00_Intake/intake.md`

3

3

Copy & build

Approve words, then edit the site

`04_Copy · 05_Site`

4

QC

Fix every error, walk the checklist

`check-deck.py`

5

Publish

Drag the zip or 05_Site onto Netlify

`06_Exports/*.zip`

RULES TO REMEMBER

Easy to miss, *caught by QC.*

Never edit a template for one deck	Work in the deck's `05_Site`. Template changes are for every future deck, logged in `CHANGELOG.md`.
Tabs and panels match by number	Add or remove both, then renumber from 0 (`data-panel`, `goPlatform(n)`, `panel-n`).
One dot per carousel card	`data-i` runs 0, 1, 2 with no gaps; only the first card is `active`.
Logo rows list every logo twice	That makes the loop seamless; edit both halves.
"N Actions" must match the list	Each timeline badge counts its checklist items.
New section → add it to the rail	Add `['id','Label']` to `var CH` in `js/motion.js` so the side dots and clicker stop there.
